

## Solder Paste Reheating Machine with Multiple Stations Intelligent Reheating and Automatic Lock for SMT Applications

Our Product Introduction

for more products please visit us on [smtmachinepart.com](http://smtmachinepart.com)

### Basic Information

- Place of Origin: China
- Brand Name: GS
- Model Number: 2 stations, / 4 stations / 8 stations / (12 stations, 16 stations, 20 stations, non-standard can be made)
- Minimum Order Quantity: 1 PCS
- Price: USD+negotiable+pcs
- Packaging Details: L940\*W500\*H260(mm)
- Delivery Time: 1-7 days
- Payment Terms: T/T
- Supply Ability: 1+pcs+per days

### Product Specification

- Brand Name: GS
- Product Name: Solder Paste Reheating Machine SMT
- Model Number 1: 2 Stations
- Model Number 2: 4 Stations
- Model Number 3: 8 Stations
- Condition: Original New/Used Original
- Highlight: **Timing Solder Paste Reheating Machine, Automatic Solder Paste Reheating Machine, SMT Solder Paste Reheating Machine**

## Product Description

# Solder Paste Reheating Machine SMT Red Glue Thawing With Can Timing Automatic Reheating Box Equipment

## Product Overview

This advanced solder paste reheating machine features multiple slots for simultaneous reheating of multiple solder paste bottles. With intelligent temperature control and independent timing for each slot, it ensures optimal solder paste activity and maintains perfect paint appearance with smooth, uniform surfaces.

## Key Features

- Assembly with imported high-quality electrical components for reliable performance
- Independent time control for each solder paste placement tank
- Automatic door locking system when starting reheating cycle
- Automatic unlocking after completing return temperature process
- Simultaneous reheating capability for multiple 500G solder paste cans
- Power failure protection with automatic unlocking if set time is not reached

## Installation & Setup

1. Place the machine on a stable, horizontal surface to prevent shaking
2. Verify machine voltage specification (AC220V) matches mains power supply
3. Connect to 220V power source and switch on
4. Inspect machine grooves for any foreign objects before operation

## Operation Procedure

1. Ensure machine is placed on stable surface and power on
2. Place solder paste containers into the designated slots
3. Activate power supply for the specific reheating slots needed
4. Adjust time settings on control panel to optimal return temperature duration
5. Press power switch - solder paste cans will automatically sink and reheating begins
6. Machine completes cycle automatically and releases cans when finished
7. Turn off power switch after use

**Debugging Tip:** Depending on solder paste quality and refrigeration conditions, adjust panel time settings to achieve optimal return temperature time. Each slot operates independently with individual alarms.

## Applications & Benefits

The primary function of this solder paste reheating machine is to maintain optimal solder paste temperature, significantly improving welding quality and product reliability. By utilizing advanced heating and insulation technology, the equipment ensures solder paste remains in perfect condition throughout use.

This system effectively restores solder paste to its original viscosity and activity, preventing precipitation and separation that can occur during extended storage. The result is complete integration of solder paste and flux, eliminating potential issues during printing and furnace processes that could compromise welding quality.

The intelligent control system precisely manages return temperature timing, ensuring the entire process from temperature restoration to solder paste retrieval occurs under ideal conditions. The equipment's innovative air flow design accelerates the reheating process while maintaining consistent solder paste quality stability.
